eID Tips

Electronic Identification Devices (eID)

Northern Territory is replacing its mob-based visual tag traceability system with eID. From 1 January 2025 all sheep and goats will need to be identified with a National Livestock Identification System (NLIS) accredited eID device before leaving their property of origin.

Tip 1: NLIS accredited eID devices have two unique numbers

- Radio frequency identification (RFID) number a non-visible 16-digit electronic microchip number that can be scanned with a handheld wand or panel reader.
- NLIS ID number a visual number printed on the outside of the device representing the property identification code (PIC) of the property it was issued to, a reference to the device manufacturer, the device type (breeder or post breeder) and species, the year of manufacture, and a device serial number.

Example: Sky blue 'breeder' eID device for sheep manufactured by Leader Products and printed for this PIC in 2023.

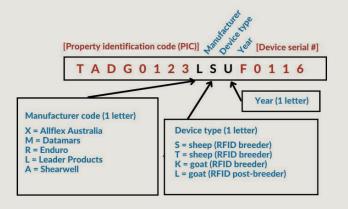

Manufacturer Device serial #

9 8 1 Space 0 0 0 3 0 0 3 9 2 8 5 3

Tagging requirements

Colour		Year	
	SKY BLUE	2023	2015
	BLACK	2024	2016
PINK	WHITE	2025	2017
	ORANGE	2026	2018
Post-breeder tags	LIGHT GREEN	2027	2019
must be pink	PURPLE	2028	2020
	YELLOW	2029	2021
	RED	2030	2022

Tip 2: There are two types of eID devices

- Breeder devices are used to permanently identify animals before they leave their property of birth.
- Post breeder devices are used to permanently identify animals introduced onto a property that have not been eID tagged or have lost their original devices.
- Animals should only be tagged with one eID device.
- Once an animal has been tagged, the device must remain with the animal for life and cannot be removed.
- Fill out the NLIS purchase order form and email it to ntnlis@nt.gov.au

Tip 3: eID devices come in different colours

- NLIS accredited breeder eID devices use a year of birth (YOB) colour system.
- The YOB colour system is voluntary in the Northern Territory. This means any devices left over from one year can be used the following year.
- Post breeder elD devices are pink for any year.
- If you buy sheep or goats, you need a supply of pink post breeder eID devices to use if it loses its breeder device.

Tip 4: Devices are species specific

• eID devices can only be used on the type of livestock they are purchased for, meaning sheep devices for sheep, and goat devices for goats. The species is recorded against each identification number on the NLIS database.

Tip 5: eID numbers are linked on the NLIS database

- RFID and NLIS ID numbers are linked together on the NLIS database. Either number can be used to record a movement.
- eID device numbers are automatically registered to your PIC on the NLIS database by the manufacturer when they are purchased.
- You do not need to scan or transfer animals when you apply the devices as they are already registered to your PIC.
- To help keep track of your eID devices you need an NLIS account at nlis.com.au
