Ehrlichiosis, a tick-borne dog disease, has been detected in the Northern Territory.

If not properly treated it can result in death.

You should take these simple steps to protect your dog:
- Have your dog on a tick control program.
- Inspect your dog daily for ticks.
- Avoid contact with other dogs when making stops along your journey.
- Be on the lookout for signs in your dog such as
  • fever
  • lethargy
  • loss of appetite
  • weight loss
  • cloudy eyes or conjunctivitis
  • pain and stiffness
  • bleeding disorders or bruising

If your dog becomes unwell, seek immediate veterinary attention.
